

HCLSoftware

One Platform to
Secure, Automate,
and Control Your
Entire IT Universe.

HCL BigFix

One Platform to Secure, Automate, and Control Your Entire IT Universe.

What if you could eliminate the noise from dozens of security and management tools? See every device, wherever it lives, and act on that information instantly from a single console?

This is the promise of HCL BigFix.

HCL BigFix eliminates tool sprawl with a single platform that delivers unified visibility, intelligent automation, and total endpoint control across servers, desktops, mobile devices, and the cloud.

HCL BigFix powers you with:

Unified visibility with unmatched precision

Go beyond basic inventory. Leverage our unique Relevance Language to ask any question about your endpoints and get instant, granular answers – a level of specific insight other tools simply can't deliver.

Automation that works – the first time

Stop chasing failed patches. Achieve an industry-leading 98%+ first-pass success rate and enforce continuous compliance with precise, self-healing automation.

Total control, especially where others fall short

Manage every endpoint confidently, no matter how complex the environment. Our efficient relay architecture is built for low-bandwidth, remote, and even air-gapped networks where other platforms struggle.

Why Business Leaders Trust HCL BigFix to Manage Over 100 Million Endpoints

When your operations are global and downtime costs millions, you don't choose a tool; you choose a partner proven to perform at enterprise scale. For decades, the world's most demanding IT environments, from federal agencies to Fortune 500 companies, have relied on HCL BigFix for its unmatched speed and unwavering reliability.

Our unique, single-agent architecture provides the foundation for real-time remediation across hundreds of thousands of devices, ensuring you can patch vulnerabilities, enforce security policies, and manage your entire fleet with absolute confidence.

The Platform Architecture: How It All Works

One platform, built from powerful, interconnected capabilities.

HCL BigFix is a unified platform built on a revolutionary single-agent architecture. The powerful design delivers a comprehensive set of interconnected capabilities that work together seamlessly.

The foundation: How we do it

The core technology that makes HCL BigFix unique in its speed and scale:

Single-agent architecture: A lightweight, intelligent agent on every endpoint provides real-time visibility and control without impacting performance, and this is to over 100 million endpoints.

Real-time action: Instantly query and command any endpoint in seconds, no matter where it is.

Massively scalable relay architecture: The backbone of our platform is the relay architecture, which creates an efficient hierarchy to manage environments with over 200,000+ endpoints. These relays deliver policies and gather data across low-bandwidth, remote, and even fully disconnected (air-gapped) networks.

The core capabilities: What you can do

The foundation enables a powerful set of functions, forming the building blocks for every HCL BigFix solution.

Full lifecycle management: Discover, provision, patch, configure, and retire every endpoint, from servers to laptops to cloud instances, from a single point of control.

Automated vulnerability remediation: Prioritize and fix threats based on real-world intelligence from sources like CISA and MITRE, focusing your team on the risks that matter most.

Continuous compliance: Automatically enforce security policies (like CIS and DISA-STIG) and prove audit-readiness by detecting and fixing configuration drift in real time.

Unified inventory and software management: Track all hardware, on-premise software, and cloud (SaaS) applications to optimize spend, reduce waste, and minimize audit risk.

AI for the employee (AEX): Resolve user IT issues automatically with a GenAI-powered virtual assistant, deflecting help desk tickets and improving the employee experience.

AI for infrastructure (Runbook AI): Resolve complex infrastructure incidents automatically using intelligent automation, preventing outages and reducing downtime.

Up next: See how we package these core capabilities into two comprehensive suites designed for your organization's primary IT environments.

Two Comprehensive Suites for Your Core Environments

One platform, purpose-built for both people and infrastructure

We know your server team has different priorities than your desktop support team. That's why we've packaged our core capabilities into two comprehensive suites, designed to provide everything you need for the two primary environments you protect.

Capability Area	HCL BigFix Workspace+ (For the end-user environment)	HCL BigFix Enterprise+ (For core IT infrastructure)
Primary Goal	Unify management of every laptop, desktop, and mobile device to enhance user productivity and security.	Keep critical servers secure, updated, and running without interruption.
AI Automation	Give employees with instant, automated IT support from a GenAI Virtual Assistant (AEX), reducing help desk tickets.	Automatically fix server and cloud issues before they can cause outages using Runbook AI .
Lifecycle Management	Manage the full lifecycle of employee devices (Windows, macOS, iOS, Android), including a self-service software portal.	Manage the full lifecycle of servers (Windows, UNIX, Linux) across hybrid and cloud environments, focusing on stability.
Vulnerability Remediation	Reduce the broad attack surface by securing the employee workspace through patching desktops, laptops, and third-party apps.	Protect critical business assets by securing the data center and cloud through patching servers, middleware, and databases..
Compliance Management	Ensure every employee device continuously meets company security standards (like CIS).	Meet the toughest government and industry standards (like DISA-STIG) to pass any audit.
Protect critical business assets.	Track hardware and software on employee endpoints to optimize licenses for common applications.	Track hardware and software on all servers to reduce risk during expensive data center audits (e.g., Oracle, IBM, Microsoft).

HCL BigFix Workspace+

Unified management for the modern workspace

Built for modern IT. Designed for every user.

HCL BigFix Workspace+ is designed to do three things exceptionally well: **improve the daily experience for your employees, simplify endpoint management for your IT team, and deliver proactive security that protects your business.** It's the single solution to keep your users productive, your IT team efficient, and every device safe.

A better experience for your employees. Give your employees the instant support they need and reduce help desk calls.

GenAI virtual assistant: Employees get fast, automated help for common IT issues, like password resets or software access requests, deflecting up to 30% of support tickets.

Self-healing automation: BigFix automatically finds and fixes common endpoint problems in the background, like low disk space or a stalled security agent, before they can disrupt users.

Digital experience insights (DEX): It understands and improves the health and performance of employees' laptops, desktops, and mobile devices, reducing employee frustration.

Unified management for your IT team.

See and manage every device from a single, simple console.

Total cross-platform coverage: Manage all your Windows, macOS, Linux, iOS, and Android devices in one place.

Real-time inventory: Always have an accurate, up-to-the-minute view of all hardware and software across your organization.

Proactive security for your business.

Stop threats faster and stay ahead of compliance needs.

Focus on real-world threats: Prioritize which vulnerabilities to fix first by using intelligence from official security sources like CISA, which tracks the vulnerabilities hackers are actively using in real-world attacks.

Automate patching for everything: Use the massive library of over 500,000 pre-built automation scripts to handle critical updates for operating systems (like Windows 11), third-party apps (like Adobe, Chrome, and Zoom), and security configurations.

Stay continuously compliant: Automatically enforce security policies (like CIS Benchmarks) to ensure your devices are always aligned with industry standards.

Why choose HCL BigFix Workspace+

Benefit	Impact
Dramatically reduce cost and risk	Avoid up to \$25M in software audit fines on employee devices.
Boost employee productivity	Cut help desk tickets by 30% with AI-driven self-service.
Improve employee experience	Increase employee satisfaction (CSAT) scores by up to 80% .
Eliminate tool sprawl	Replace an average of 6 different endpoint tools with a single platform.

HCL BigFix Enterprise+

Zero-touch automation for your core infrastructure

Stable. Secure. Always Available.

HCL BigFix Enterprise+ gives you complete control over your most critical infrastructure, servers and cloud environments. With smarter automation, proactive security, and total visibility, it keeps your systems stable, secure, and always available.

It works using intelligent “runbooks.” Think of them as digital playbooks that instantly execute the right steps to resolve a problem, freeing up your experts and dramatically reducing downtime.

Automated incident resolution

AI-powered incident response: AI-powered runbooks automatically fix problems from start to finish. You maintain full control with optional human approval for critical steps.

Zero-touch operations: Instantly fix routine issues with simple, automated rules (e.g., automatically free up server disk space when it runs low).

Manage everything, everywhere:

Securely patch, configure, and manage all your servers, whether they are in your data center or in the cloud (AWS, Azure, GCP).

Why choose HCL BigFix Enterprise+

Dramatically cut costs

Avoid over **\$1M** in vendor audit fines.

Master compliance

Reduce audit response time from **weeks to minutes.**

Eliminate security gaps

Achieve over **98%** first-pass patch success.

Accelerate operations

Cut server provisioning & deployment time by **85%**.

Automated security for your core systems

Focus on real-world threats: Prioritize and fix the vulnerabilities that hackers are actually using, so your team focuses on the risks that matter most.

Patch Anything, Instantly: Use the library of 500K+ automated fixes for operating systems, databases, and middleware to patch quickly and confidently.

Stay Audit-Ready, Always:

Automatically enforce major security standards (like CIS). If a server setting drifts, HCL BigFix fixes it in real-time, ensuring continuous compliance.

Total visibility and control

Live server investigation: Instantly investigate performance or security issues on any server in seconds.

Software license optimization:

Eliminate wasted software spend and avoid costly audit penalties by getting a complete view of all server software.

Solving Specific Challenges with HCL **BigFix Modules**

For organizations that need to solve a specific problem first, the core capabilities of the HCL BigFix platform are also available as standalone or modular solutions.

Choose the tool that fits your immediate need, with the confidence that you can expand to a full suite later without replacing your architecture.

HCL BigFix for Vulnerability Remediation

Automated remediation for your entire attack surface

Fix faster. Patch smarter. Protect better.

Two paths to faster remediation: SaaS or on-prem remediation

When your primary mandate is to find and fix vulnerabilities, you need a solution that is both powerful and fits your operational model. HCL BigFix offers vulnerability remediation in two deployment models, so you can choose the approach that's right for you.

Which remediation approach is right for you?

	HCL BigFix SaaS Remediate	HCL BigFix Remediate
Who is it for?	Teams that want speed and simplicity with zero infrastructure to manage.	Enterprises that need maximum control, customization, and deep scalability.
How it works	A fully cloud-native SaaS platform managed by HCL. Sign up and start patching in minutes.	A powerful software platform, proven to go live in as little as a few hours.
Primary advantage	ACCELERATION: The fastest way to reduce your attack surface with the industry's largest library of pre-built automation.	CONTROL and SCALE: Get enterprise-proven power, flexibility, and scalability for the most complex, secure environments.
Key differentiators	Builds on the core BigFix engine, PLUS: <ul style="list-style-type: none"> • Instant, zero-infrastructure setup • Built-in tools for team collaboration. • Automatic platform updates. • A streamlined, cloud-first experience. 	The complete, foundational platform: <ul style="list-style-type: none"> • Total control over data, infrastructure, and updates. • Proven scalability to 300,000+ endpoints. • Full support for air-gapped networks. • Deep customization and integration capabilities.

Why choose HCL BigFix for Remediation

Benefit	Impact
Close gaps faster	Achieve a 98% first-pass patch success rate . Fix critical vulnerabilities up to 10x faster than traditional tools.
Focus on real-world threats.	Prioritize threats using intelligence from CISA . Focus your team on the vulnerabilities that hackers are actively using.
Automate the full cycle	Go from discovery to remediation in one platform. Use our library of 500,000+ pre-built automation scripts .
Unify security and IT Ops	Give security and IT teams a single, shared platform to find and fix vulnerabilities together.

HCL BigFix for Software Asset Management

Total control over software costs and compliance

Complete visibility. Smarter decisions. Lower spend.

True software control starts with knowing exactly what you have. In today's hybrid world, that inventory spans from software installed on desktops to applications accessed in the cloud.

HCL BigFix Inventory provides full-spectrum software intelligence through a powerful combination of an on-premise foundation and a cloud-focused extension. It gives you a single, unified view to cut costs and reduce risk.

The foundation: Master your software estate

This is the core of your **Software Asset Management (SAM)** program, powered by **HCL BigFix Inventory**. As a leading solution verified by Oracle and certified by IBM, it automatically discovers all installed software on your endpoints, whether on-premise, in the cloud, or in containers.

It provides deep visibility into over 1 million software versions, giving users the data they need to reconcile licenses, pass audits, and streamline operations.

Extend visibility to SaaS

Extend your view from installed software to cloud subscriptions with **HCL BigFix SaaS Management**. This module is essential for controlling your SaaS ecosystem's rising costs and risks. It uses multiple discovery methods, including browser tracking, SSO, and API connections, to find all the cloud applications your teams are using, whether approved or not.

With this complete view, you get clear usage insights to eliminate waste, manage renewals more effectively, and strengthen security by tracking compliance with major standards like SOC 2 and GDPR.

Why choose HCL BigFix for software asset management

Benefit	Impact
Stop overspending on SaaS	Cut SaaS costs by up to 25% by identifying and eliminating unused licenses and redundant subscriptions.
Pass audits with confidence	Avoid millions in non-compliance penalties with a solution verified by Oracle and certified by IBM.
Eliminate security blind spots	Discover "Shadow IT" with out-of-the-box connections to over 500 SaaS apps. Reduce your attack surface by exposing hidden apps.
Create a single source of truth	Enable better governance and automation by providing real-time, unified asset data across platforms like ServiceNow.

HCL BigFix AEX

Autonomous support for your entire organization

Automate support. Empower users. Free your IT team.

HCL BigFix AEX is the AI-powered first responder that autonomously resolves common employee requests for IT, HR, and other business departments. It provides around-the-clock, human-like support through the channels your employees already use, like Microsoft Teams, Slack, and email.

By automating the entire resolution process for tasks like granting software access, diagnosing device issues, and onboarding new hires, AEX dramatically reduces ticket volume, improves employee satisfaction, and frees your expert teams to focus on high-value strategic work.

More than a virtual assistant. A true agentic AI.

Self-healing automations

Detects and resolves endpoint issues before users file tickets. Everything happens in the background, without delays.

Personalized conversations

Understands user profiles and history to deliver personalized support. No need for employees to repeat themselves.

Omnichannel support

Provides consistent AI-driven assistance through Teams, Slack, WhatsApp, voice assistants, email, and other channels.

Agentic AI Studio

Delivers more than 600 prebuilt workflows or you can customize your own for IT, HR, Sales, Facilities, and other departments.

One-Click Integrations

Facilitates instant connectivity to platforms like ServiceNow, Okta, Workday, SAP, and SIEM tools. No complex setup required.

Built for scale, security, and speed

- Cloud-native delivery with enterprise-grade data protection
- Supports 20+ languages for global teams
- Security verified through SAST, DAST, threat modeling, and IAM protocols

Why choose HCL BigFix AEX

Benefit	Impact
Cost savings	Save over \$200,000 per year by automating support and deflecting tickets
Fewer tickets	Achieve up to 80% ticket deflection with AI-led resolution
More satisfied users	Improve customer satisfaction scores by up to 98
Faster time-to-value	Launch quickly using 600+ workflows and 25+ plug-and-play integrations
Operational efficiency	Save over 26,000 IT hours annually in active deployments

HCL BigFix Runbook AI

Prevent outages with intelligent automation

Resolve problems, don't just route them.

HCL BigFix Runbook AI uses machine learning and natural language processing to convert incident data into an automated resolution.

It goes beyond rule-based scripting by learning from context, adapting to your environment, and connecting directly with your ITSM and monitoring tools to resolve issues end-to-end.

Smarter, faster remediation at scale

AI-powered context recognition

HCL BigFix Runbook AI understands incident details using natural language processing and machine learning, then recommends the most relevant runbook based on the problem.

End-to-end automation

It handles the entire resolution process across incidents, service requests, and change events - no delays, no manual handoffs.

350+ ready-to-use runbooks

Enables quick remediation through a library of customizable automations covering the most frequent and high-impact infrastructure issues.

Designed for complex, real-world environments

Broad platform coverage

Automate remediation across a wider range of Windows, Linux, and UNIX systems than any other runbook automation platform.

Enterprise-grade integrations

Connect easily to ServiceNow, Remedy, Moogsoft, Zenoss, and other tools. Use these integrations to build a unified automation engine that incorporates ticketing, event management, and observability.

Continuous improvement loop

Analyze trends from ticket data, incident patterns, and resolution metrics to identify new automation opportunities and improve coverage over time.

Why choose HCL BigFix Runbook AI

Benefit	Impact
Prevent critical outages	Slash mean time to resolution (MTTR) by up to 85% to keep your business-critical services running.
Boost team efficiency	Cut manual IT effort by 30-60% by automating repetitive incident response and freeing up your experts.
Accelerate time-to-value	Achieve true zero-touch automation in the first ~4 months of implementation.
Automate intelligently	Use AI to instantly analyze incident tickets from tools like ServiceNow and apply the right fix from 350+ pre-built runbooks.

HCL BigFix Lifecycle

Total endpoint control, from provisioning to retirement

One platform. Complete automation. Total confidence.

HCL BigFix Lifecycle provides a single platform to automate the entire lifecycle of your endpoints, from provisioning new devices to ongoing patching, software deployment, and final retirement. It supports over 100 operating system versions, giving you total control and reducing risk across your entire IT environment.

Automate and optimize IT Operations

Automate patching and OS upgrades:

Reliably deploy patches for operating systems and third-party apps. Automate OS deployments and in-place upgrades to reduce IT overhead and user disruption.

Simplify software delivery and user support:

Empower employees to install approved applications through an easy self-service portal, and enable your help desk to securely manage and troubleshoot remote devices from any location.

Optimize energy consumption:

Implement and enforce power management policies across your entire device fleet to reduce energy costs without impacting uptime or performance.

Integrated security and intelligence

Fix vulnerabilities faster: Prioritize which threats to fix first using real-world intelligence (CyberFOCUS). Go beyond simple scores to focus on the vulnerabilities that pose the greatest risk to your business.

Maintain continuous compliance:

Automatically detect and fix configuration drift in real-time, keeping your endpoints aligned with security policies and ensuring you are always audit-ready.

Gain deeper insights: Connect HCL BigFix data with your broader IT ecosystem (like ITSMs and CMDBs) to strengthen decision-making with detailed reports and historical trends.

Why choose HCL BigFix Lifecycle

Benefit	Impact
Dramatically reduce risk	Achieve >98% patch success. Cut remediation cycles from weeks to minutes .
Get total visibility and scale	Manage up to 300,000 endpoints per server with 360-degree visibility across 100+ operating systems.

HCL BigFix Compliance

Always secure.
Always audit-ready.

Enforce, remediate, and report - automatically.

HCL BigFix Compliance transforms security compliance from a periodic, manual effort into a continuous, automated state. With over 20,000 pre-built security checks and real-time remediation, you can maintain a strong security posture and meet strict regulatory demands without increasing your team's workload.

Automated policy enforcement

Go beyond scans with real-time enforcement: Instantly detect and fix any configuration drift as it happens. Eliminate the gaps and delays of scheduled scans.

Use industry-standard checklists out-of-the-box: Support major benchmarks like CIS, DISA-STIG, and PCI-DSS with pre-built, customizable checklists to ensure your systems are correctly configured

Integrated remediation and reporting

Remediate with speed and intelligence: Enforce compliance through patching and configuration management with a >98% first-pass success rate. Prioritize what to fix first based on real-world threat data (CyberFOCUS) to reduce the most critical risks first.

Generate instant, audit-ready reports: Produce live dashboards and detailed historical reports on demand. Give internal stakeholders and external auditors the clear, concise proof of compliance they need, when they need it.

Why choose HCL BigFix Compliance

Benefit	Impact
Pass audits instantly	Cut audit preparation time from weeks to just minutes with on-demand, real-time reporting.
Stay continuously secure	Achieve and maintain 99% compliance across the enterprise through automated, real-time enforcement.
Automate industry standards	Use over 35,000 out-of-the-box checks to enforce major benchmarks like CIS, DISA-STIG, and PCI-DSS.
Eliminate manual effort	Slash compliance costs by replacing periodic, manual "check-ins" with 24/7 automated visibility and remediation.

HCL BigFix Service Management

AI-powered service for the modern enterprise

Legacy ITSM platforms are slow to implement, expensive to scale, and struggle to integrate modern AI. They create bottlenecks that frustrate employees and drain IT budgets. HCL BigFix Service Management breaks this cycle. It's a no-code, AI-powered platform built to solve today's biggest IT challenges, from boosting productivity and reducing costs to confidently adopting new technologies.

Driving employee productivity

Resolve issues faster: Empower your service desk with a Generative AI-powered virtual agent and automated runbooks that dramatically improve first-touch resolution rates.

Deliver modern self-service: Give employees an enterprise-grade self-service experience with service catalogs, knowledge bases, and support resources available 24/7 on any device.

Reducing the cost of service management

Go live in weeks, not months: Eliminate the long, complex implementation cycles of traditional tools. Experience a simplified, all-in-one licensing model with no hidden fees for add-on modules.

Administer without specialized skills:

Leverage a scalable, flexible architecture with no-code administration and 1-click upgrades, minimizing operating costs and freeing up your technical experts.

Adopting new technology with confidence

Leverage embedded AI platform: Move beyond "bolt-on" AI. Our platform has agentic and intelligent capabilities built-in, ready to use with pre-built templates and workflows.

Trust security and compliance by design:

Deploy with confidence knowing that security is not an afterthought. Our platform is built with security and compliance integrated at its core.

Why choose HCL BigFix Service Management

Benefit	Impact
Maximize cost effectiveness	Lower your Total Cost of Ownership (TCO) by 65% and boost operational efficiency by 40% .
Accelerate service delivery	Implement 60% quicker than with traditional ITSM tools and slash upgrade timelines by 95% .
Enhance user experience	Achieve 98% CSAT by delivering fast, personalized, AI-powered support
Improve resolution rates	Boost first-touch resolution by 30% and improve support user efficiency by ~50% .

HCL BigFix Cloud Lifecycle Management

Unified control for a multi-cloud world.

Simplify. Optimize. Secure.

Managing multiple cloud environments leads to tool sprawl, manual approval delays, and uncontrolled spending. HCL BigFix Cloud Lifecycle Management brings order, giving you a single platform to automate provisioning, govern costs, and enforce security policies across your entire hybrid and multi-cloud infrastructure. It's the targeted solution for today's biggest cloud challenges: inefficient operations, cloud waste, and security risks.

Simplify cloud operations

Automate and accelerate provisioning:

Use standardized Infrastructure-as-Code (IaC) blueprints to deliver error-free, automated deployments, eliminating manual tasks and approval bottlenecks.

Empower teams with self-service:

Provide developers and IT users with a simple, API-driven portal to request and manage cloud resources on demand, dramatically improving time-to-market.

Optimize cloud spend

Gain total spend visibility: Eliminate cloud waste with real-time usage dashboards and metering reports. Track resource usage across all providers to understand exactly where your money is going.

Enforce financial governance: Move to predictable, flat-term pricing and use out-of-the-box billing reports to prevent surprise costs and spot trends to reduce wastage.

Secure your multi-cloud footprint

Automate policy enforcement: Use automated policy workflows and real-time alerts to ensure your cloud resources continuously meet security and compliance standards 24/7.

Unify monitoring and control: Get a single view for monitoring, backup, and recovery across your entire hybrid infrastructure. Reduce the security blind spots caused by disconnected tools.

Why choose HCL BigFix Service Management

Benefit	Impact
Drastically accelerate operations	Cut your cloud provisioning lifecycle by 85%. Achieve 98% automated, error-free deployments.
Eliminate cloud waste	Improve cloud asset utilization by 40%. Stop overspending with full usage visibility.
Strengthen multi-cloud security	Enforce security policies automatically across all clouds. Close gaps faster with real-time compliance alerts.
Simplify complex environments	Unify your entire cloud infrastructure. Empower teams with self-service portals and standardized blueprints.

Ready to Make it a Reality?

The vision of a single platform to manage your entire IT universe is not just a possibility; it's the reality for over 100 million endpoints worldwide.

HCL BigFix delivers the unified visibility, intelligent automation, and total control you need to eliminate tool sprawl, secure your environment, and empower your teams.

Take the next step to transform your IT operations today.

HCLSoftware

About HCLSoftware

HCLSoftware is a global leader in software innovation, dedicated to powering the Digital+ Economy. We develop, market, sell, and support transformative solutions across business and industry, intelligent operations, total experience, data and analytics, and cybersecurity. Built on a rich heritage of pioneering spirit and unwavering commitment to customer success, we deliver best-in-class software products that empower organizations to achieve their goals. Our core values of integrity, inclusion, value creation, people centricity, and social responsibility guide everything we do. HCLSoftware serves more than 20,000 organizations, including a majority of the Fortune 100 and almost half of the Fortune 500. **Learn more about how HCLSoftware can help you achieve your goals at <https://www.hcl-software.com>**
