HCLSoftware

Evolve What Works. Don't Start Over.

Restart your HCL Domino support to unlock Sovereign AI, modern UX, and government-grade security, without migrating or rewriting a single app.

Let's restart

The Migration Myth: High Risk, High Cost

For years, the industry narrative has pushed a costly agenda: to modernize, you must rip and replace your existing infrastructure.

For IT leaders, migrating off Domino means years of rebuilding time, spiraling project costs, dual-licensing taxes, and the severe risk of losing decades of proven, customized business logic.

There is a frictionless way forward. Smart IT teams don't replace everything. They sustain what works, replace what doesn't, and invest where the return is highest.

The Solution: Capitalize on the platform you already own

By restarting your support with HCL Domino 2026, you instantly restore your compliance posture and gain access to seven years of continuous innovation, at an exclusive loyalty rate.

Why 460+ Enterprises Have Chosen to Restart

+110%
ROI on Domino TCO within 18 months

-62%
Cost vs. rebuilding on another platform

+23%
Faster app redesign with 2026 UX

Ready to (Re)Start?

Your applications. Your email. Your data.
Your absolute control, brought fully up to date.

Connect with an HCL Domino specialist today for a free, zero-obligation assessment to calculate your custom restart savings.

Migrate vs. Restart: The true cost of change

The Risk of Migrating	The Advantages of a Domino Restart
Years of disruption and spiraling project costs	Immediate restoration of support and compliance
Dual licensing and migration tax during transition	Predictable costs: extend the asset you already own
Data-privacy exposure with external/public AI clouds	Private Sovereign AI that never leaves your perimeter
Loss of proven business logic and workflows	Keep all data, workflows, and integrations intact
No guarantee of feature parity on the new platform	Modern UX on any device with zero rewrites required

4 Ways HCL Domino 2026 Solves Today's IT Challenges

Introduce AI on Your Terms with HCL Domino IQ

Add GenAI to your existing apps without sending a single byte to a public cloud. Domino IQ runs private LLMs on your own servers, even air-gapped. Safely enable summarization, task extraction, and built-in RAG to query your databases with zero risk of data harvesting.

Deploy Government-Grade Security

Close the vulnerability gap of unsupported software. Rely on a platform trusted by global banks and governments. Domino 2026 is validated to ISO 27001 and has BSI-certified components, featuring phishing-resistant Passkeys and OIDC integration that plug directly into your current identity systems.

Achieve Sovereign Collaboration

Gain total digital independence. Keep your apps, mail, chat, and meetings fully under your control on-prem or in a private cloud. Equip your teams with a modern UI, persistent mobile notifications, auto-transcripts, and document co-editing, without ceding data to foreign clouds.

Modernize Apps Without Rewriting Code

Extend your trusted applications to any device instantly. HCL Nomad runs your existing Domino apps in the browser or on mobile without rewrites. Need something new? Build workflow apps rapidly with Domino Leap and deploy them on any Kubernetes environment (public, private, or hybrid).

Don't take our word for it. Listen to the voice of the customer

> We evaluated migrating to another vendor but realized the effort and risk were too high, so we upgraded HCL Domino instead.

Global Real Estate Company

> Domino releases under HCLSoftware have been consistently stable. We upgrade quickly to maintain security and access new features.
