

HCL AION

A Complete Platform for Enterprise AI Innovation

Build, govern, and deploy mission-critical AI and Generative AI applications with a unified platform that combines the speed of AutoML, the control of MLOps, and the flexibility of guided GenAI workflows – all within a secure, enterprise-grade environment.

HCL AION helps organizations move from raw data and business intent to production-ready intelligence without fragmented tools, disconnected teams, or manual lifecycle handoffs.

Accelerate Enterprise AI Outcomes

Democratize AI Across Teams

Enable business users and technical teams with low-code/no-code and prompt-driven experiences.

Accelerate the AI Lifecycle

Move faster from experimentation to production with streamlined workflows and automation.

Enable Responsible AI Adoption

Build transparent, explainable, and governed AI systems across ML and GenAI initiatives.

Build Cross-Functional Collaboration

Connect business, engineering, and data science teams through shared workflows and lifecycle continuity.

Scale AI with Enterprise Confidence

Support enterprise-grade AI operations across cloud, on-premises, and hybrid environments.

Enterprise Features Built for AI at Scale

- **AutoML & Guided Model Development**
Accelerate model creation with low-code/no-code workflows and advanced development options.
- **Fine-Tuning & Prompt Management**
Build enterprise-specific GenAI applications with governed prompt workflows and fine-tuned LLM support.
- **Governance, Security & Access Control**
Implement role-based governance across users, datasets, pipelines, prompts, and models.
- **Monitoring, Explainability & Lineage**
Track model behavior with monitoring, explainability, uncertainty quantification, and full lifecycle visibility.
- **Flexible Deployment Infrastructure**
Deploy consistently across cloud, on-premises, and hybrid environments with enterprise scalability.

Why Choose HCL AION?

Unified platform for the complete AI/ML and GenAI lifecycle

Faster time-to-value with AutoML, guided workflows, and prompt-driven AI development

Low-code/no-code experiences that expand AI participation across teams

Built-in governance, monitoring, explainability, and Responsible AI capabilities

Enterprise-ready scalability, security, deployment flexibility, and operational reliability

Advanced GenAI support including fine-tuning workflows, prompt management, model validation, and experimentation environments

Powered by Intelligent AI Orchestration

HCL AION is driven by a dynamic orchestration engine – the invisible intelligence connecting and automating every stage of the AI lifecycle across Classical ML and Generative AI. Designed to simplify how teams build and scale AI, the platform seamlessly manages workflows from data preparation to deployment while enabling smooth transitions between:

No-code experimentation and version-controlled pipelines

Business prompts and governed fine-tuned models

Rapid prototyping and enterprise-scale production

With complete data, model, and prompt lineage, organizations gain full visibility and governance regardless of how AI solutions are developed.

Build Responsible, Scalable AI with Confidence

Transform ideas into production-ready AI faster with a platform designed for enterprise scale, governance, and continuous innovation.
