BOGE KOMPRESSOREN Otto
Boge GmbH & Co. KG has been a renowned and established manufacturer of compressors and air systems in Germany for over 110 years. With an impressive network of approximately 700 dedicated employees worldwide, around 430 of whom are based in Bielefeld, BOGE supplies more than 120 countries with first-class products and systems, including comprehensive customer service.
HCL Domino has been an integral part of BOGE’s IT strategy since the late 1990s. With the initial implementation of version 4.6, Domino has proven its role as a reliable and efficient platform for a variety of custom developments, particularly in the form of workflow improvements. Thanks to about 500 tailored Domino applications, BOGE has significantly optimized and streamlined its business processes.

Within BOGE’s entire IT infrastructure, Domino plays a prominent role. By connecting Domino to the company’s internal SAP system through SOAP interfaces and Lotus Enterprise Integrator (LEI), a seamless data exchange is ensured, leading to a significant improvement and acceleration of business processes.
Domino Leap Accelerates Innovation

To stay up-to-date and take full advantage of ongoing technological developments, BOGE is currently conducting an upgrade from Domino R9 to v12.02. Since early 2023, HCL Domino Leap has been successfully implemented, opening new pathways in application development and business automation for both developers and business users.

A prime example of the application possibilities of HCL Domino Leap is the sick leave procedure. Employees can now more easily submit their sick leave notices through a Leap web form, which is subsequently transferred to the existing Domino database for further processing or sent directly to the SAP system.

Also, in the area of material release, the implementation of Domino Leap has made a significant impact. Here, BOGE is replacing a previous paper form with a digital process, where the approval steps are controlled using the Leap workflow editor. This clearly demonstrates how HCL Domino Leap simplifies and accelerates digitization of workflows using the core HCL Domino platform.
Domino Is Integral to BOGE’s Future Digital Transformation

In parallel with these improvements, BOGE is transforming its Domino applications into web applications using Angular frontend and Spring.

The long-term use and continuous development of HCL Domino at BOGE impressively demonstrate the platform’s adaptability and performance capabilities. With HCL Domino, BOGE can continuously optimize its business processes and respond to changing requirements without having to compromise on security or reliability. This way, Domino assists BOGE in achieving excellent results and provide outstanding customer service.
Get the Most Domino Has to Offer

Upgrading to the latest Domino release unlocks powerful new features, reduces security threat exposure, enables modern toolsets, and delivers a feature-rich app dev platform supporting your digital transformation journey.
