

Extend the Power of BigFix to Nutanix deployments

Enabling visibility and control of Nutanix endpoints within BigFix is easy.

Nutanix delivers an hyperconverged infrastructure (HCI) platform that natively converges compute, virtualization and storage into a resilient, software-defined solution. Nutanix supports leading hypervisors, including solutions from VMware, Microsoft, Citrix, and the native Nutanix hypervisor, AHV (Acropolis Hypervisor).

BigFix has partnered with Nutanix to extend the power of BigFix to Nutanix deployments. By supporting Nutanix, BigFix can manage every endpoint regardless of virtualization technology, operating system or location.

Installation

BigFix Agents are deployed to Nutanix guest VMs using the typical BigFix agent installation process.

To understand both the capacity of virtual machines as well as the subcapacity consumption of the physical host, configure the VM Manager for Nutanix Prism in BigFix Inventory. Additional information is available by visiting https://help.hcltechsw.com/bigfix/9.5/inventory/Inventory/admin/r_nutanix.html.

BigFix is Nutanix Ready

BigFix support of Nutanix has been tested and validated with BigFix Lifecycle, BigFix Compliance and BigFix Inventory. In doing so, BigFix has been given the Nutanix Ready AHV badge. The Nutanix Ready AHV badge is awarded to products and solutions that have been tested and verified to work on or with AHV, Nutanix's built-in hypervisor.
